Lead threatens children’s health

- Serious damage to how kids develop, grow, and behave.
- Lead flows from the blood to the brain, kidneys, and bones.
- Children are more vulnerable.
- There is no safe level of lead.
Lead contamination of schools’ drinking water is widespread
Where there is lead, there is risk.

Current policies fail to safeguard our kids’ drinking water
Solutions to ensure safe drinking water for our children:

- Get the Lead Out

- Immediate measures – filters, corrosion control

- Doctor’s Orders – do not exceed 1 ppb

- Robust funding to achieve these protections.
